

LIP-LOCK BOLTS

Specifically designed for use with clip extrusion, the lip-lock bolt will sit perfectly in the channel and ensure no movement in your clip fixings giving you an overall more secure and professional fitting.

ANTI-VANDAL NUT

Anti-vandal nuts are used instead of a normal nut on your clips, you would tighten them up until its tightest at which point the end will shear off meaning that the only way in which you could remove them would be with a cutting device such as a grinder or hack saw.
